Burhanuddin Rajkotwala

Full-stack developer · B.Tech CSE (Data Science) student · Mumbai, India

burhanuddinrajkotwala11@gmail.com github.com/BurhanRajkot Portfolio: burhanuddin-rajkotwala.vercel.app

Open to internships & freelance work

PROFILE

Third-year Computer Science (Data Science) student with a 9.0 CGPA. I build websites for real businesses and my own full-stack and AI products, and take each one from first design to a live domain.

EDUCATION

DJ Sanghvi College of Engineering · Mumbai — Current · 3rd year

B.Tech, Computer Science & Engineering (Data Science) · **CGPA 9.0**

EXPERIENCE

Freelance web developer · Self-employed, Mumbai — Current

- **Attarwala's** (attarwalas.com): built and maintain the custom, mobile-first Shopify theme for a Mumbai perfume house running since 1998. Wrote a Shopify Function that enforces "pick any N for a fixed price" bundles at checkout, with one discount covering every current and future offer.
- **Enlighten SEN Services** (enlightensenservices.in): designed and built a new Next.js + Tailwind site for a special-education company, replacing an old PHP template. Enquiry forms email the team through Resend with a WhatsApp fallback; moved the domain to Vercel with HTTPS.
- **Deccan Cans** (store preview): built a custom Shopify OS 2.0 theme from scratch for a Mumbai tin-container manufacturer. Per-size rates and minimum order quantities are enforced on the product page, in the cart and on "Buy it now"; a seed script loads the catalogue, content and 89 redirects through the Admin API.

PROJECTS

StreamVault · Movie & TV discovery platform, solo — Live · Source

- CineMatch recommender: nine candidate sources merged with reciprocal rank fusion, then filtering, ranking (diversity, exploration, position-bias correction) and mixing into home-page rows; a two-tower PyTorch model supplies user and title embeddings.
- Auth0 sign-in with 2FA, Redis caching, rate limiting, admin dashboard; Docker / Kubernetes configs and Playwright end-to-end tests.

React · TypeScript · Express · Supabase · Redis · Python · PyTorch

App Blocker · Android app — Source

Locks chosen apps for a set time. An Accessibility Service bounces locked apps (and the settings that could disable it) back home, Device Admin guards uninstalling, and the only early exit is an unlock key signed offline by a separate Python tool. Kotlin · Jetpack Compose · Room

Misinfo Detector · Mumbai Hacks 2025 — Source

Chrome extension that fact-checks a page with a team of AI agents (summary, fact-check, news cross-reference, bias) and a judge agent that returns a verdict with a confidence score. Python · Flask · Chrome Extension

MediBase · REDACT 2025, SPIT — Source

Predicts a likely condition from blood-test values with XGBoost, explains each prediction with SHAP and flags out-of-range values; Gemini writes a plain-language summary. Python · XGBoost · SHAP · Streamlit

Claw & Agentic AI · AI agents — Claw · Agentic AI

Claw: a Telegram assistant across my Gmail, Calendar, Tasks and Drive. Agentic AI: a command-line coding agent using Gemini function calling, sandboxed to one folder.

SKILLS

Frontend	React, TypeScript, JavaScript, Next.js, Tailwind CSS, Three.js, GSAP
Backend	Node.js, Express, Flask, PostgreSQL, Supabase, Redis, REST APIs
Commerce	Shopify, Liquid, Shopify Functions
Data & AI	Python, PyTorch, scikit-learn, XGBoost, SHAP, Gemini API, LLM agents
Mobile & tools	Kotlin, Jetpack Compose, Docker, Kubernetes, Git, Linux, Vercel

HACKATHONS

Smart India Hackathon 2026 **NIMIS Hackathon** 2026 **Mumbai Hacks** 2025
REDACT, SPIT 2025 **DataHack** 2024
